MYMESH-MOD17M

Passive Infra Red (PIR) Occupancy Detector & Photocell Module

(Input: 100-240 Vac 50/60Hz)

This MYMESH-MOD17M module is designed for building into luminaires or it can be mounted onto a Eurodata plate. Configurable for any room occupancy style, via the Mymesh App.

Installation:

Please read these instructions before installing the product.
NOTE: MYMESH-MOD17M is compatible with Mymesh commissioning tools.

To be installed by a competent person with reference to BS 7671 or equivalent local standards. If in doubt consult a qualified electrician.

- A mounting bezel is supplied to assist manufacturers to mount the MYMESH-MOD17M control unit into a luminaire housing.
- The MYMESH-MOD17M control unit snap fits into the mounting bezel.
- The Power Supply (MESH-PS) for the MYMESH-MOD17M device should be connected as shown in diagram 2:
  L - Live in.   N - Neutral in.
- MYMESH-MOD17M must be connected to the Power Supply (MESH-PS) via the telejack communication cable provided.
  NOTE: The use of non compatible connectors may damage the MYMESH-MOD17M or MESH-PS and will invalidate the warranty.

Operation:

To check the operation of the MYMESH-MOD17M :

- Turn on the supply then after 20 seconds if the sensor has recognised movement of a person within its zone of detection the integral red LED on MYMESH-MOD17M will stay illuminated for 4 seconds before the red LED turns off.
- Thereafter, every time movement is detected by MYMESH-MOD17M the integral red LED will stay illuminated for 4 seconds.

The control also features adjustable time out (time lag) control and daylight threshold control which are configured via the Mymesh App.

Precautions:

- Do not place the MYMESH-MOD17M near heat sources, fans or in ventilated ceiling voids.
- MYMESH-MOD17M can be wired in parallel (sharing the same Live and Neutral).
- Do not place close to, or positioned such that, any light source points directly into the MYMESH-MOD17M.
- Ensure wires and cables are securely held within the connection terminals.
- The MYMESH-MOD17M should be protected by a 5 or 6 Ampere mcb or fuse.
- Disconnect the MYMESH-MOD17M from the circuit before performing insulation testing of the wiring circuit.
